Birgit A. Arb, MD
President
North Carolina Oncology Association
11600 Nebel Street, Suite 201
Rockville, MD 20852-2557

Dear Dr. Arb:

I am in receipt of your letter to the Honorable Virginia Foxx and first and foremost, please be assured that APP Pharmaceuticals is acutely aware of the pressures that oncologists are under when a critically needed cancer treatment is unavailable. As a manufacturer of Leucovorin, Doxorubicin, Etoposide, Cisplatin and Cytarabine, APP is working hard to make these therapies available to patients who require them as part of their treatment regime.

As you know, during the past year several manufacturers of oncology drugs have reduced supply due to manufacturing issues thereby significantly disrupting availability. APP Pharmaceuticals has attempted to help fill the void left by these pharmaceutical companies. We are accomplishing this by expediting raw material orders from our suppliers and by quickly scheduling additional manufacturing so that we can produce more doses. As a result, APP has been able to significantly expand its output.

Where previously APP provided a small portion of the market demand for the above mentioned products we have now become a primary manufacturer. For example, over the course of several months APP went from supplying 10% of market demand for Doxorubicin to supplying 60% of historical market demand, and we are working hard to produce as much additional Doxorubicin as possible. We anticipate our supply to steadily increase over the next two or three months.

Physicians who prescribe Leucovorin will find that it will also become more accessible in the coming months. APP worked collaboratively with FDA Drug Shortage to expedite the review and approval of the company's Prior Approval Supplement so that we are now able to manufacture the drug at an additional facility.

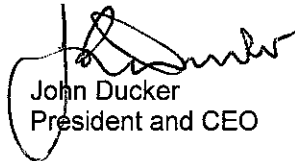

In addition, we have increased our production of Etoposide from a mere 2.5% of market demand to nearly 29% and our production of Cisplatin has jumped from 37% of market demand to approximately 64%. The good news is that as a result of our commitment, Etoposide is now available in all three dosage forms and we currently have two of three Cisplatin dosage forms available.

APP Pharmaceuticals is committed to helping find ways to solve the shortage of oncology drugs. As a result of our efforts we expect the market to stabilize very soon. Furthermore, we continue to diligently discuss this issue both internally as well as with our parent company, Fresenius Kabi, in order to find additional approaches to alleviate these shortages.
